

TITAN AI Studio

Start from your Salesforce data model, keep records protected, avoid AI token anxiety, and manage every update in Titan.

Product Overview

Titan AI Studio helps Salesforce teams start building forms and portals with a simple prompt.

Describe what you need, and Titan turns it into a structured, styled experience connected to your Salesforce data model. From there, teams can refine through follow-up prompts or keep editing in Titan's no-code builder.

Teams move faster with Titan while keeping control over their structure, styling, logic, and Salesforce behavior.

The Problem

The Data Model Shapes The Experience

- ⊗ Every Salesforce org has its own structure, so AI needs to work from that model
- ⊗ Admins must correct Salesforce fields, mappings, and logic before the project is ready

Credit Limits Slow Teams Down

- ⊗ AI is hard to use when every prompt is tied to usage costs
- ⊗ Teams need to ask, adjust, and refine projects without worrying about cost calculations

Protect Salesforce Records

- ⊗ Confidential CRM data shouldn't be exposed to unsecured AI tools
- ⊗ AI should guide the build using context, but it shouldn't access Salesforce data without proper governance

Project Maintenance Needs More Than Prompts

- ⊗ AI tools move quickly, but enterprise builds need to stay operable after launch
- ⊗ Teams need prompt speed and no-code control over Salesforce logic, mappings, and behavior

Titan AI Studio Is a Salesforce-First Environment

Prompt the Project

Describe the form or portal you want to build, including the purpose, audience, fields, layout, brand guidelines, and Salesforce action.

Build From Your Salesforce Model

Titan AI Studio uses your objects and fields to prepare the structure, mappings, and Salesforce actions, then turns them into a designed form or portal your team can review, refine, and launch.

Shape the Build in Titan

Review the layout, content, styling, components, and Salesforce-connected logic inside Titan's no-code builder.

Key Capabilities

✓ Records Stay Protected

Titan AI Studio never touches your Salesforce records but uses its data model to shape the build and experience.

✓ AI That Knows Your Salesforce Data Model

Connect forms and portals to Salesforce objects, field structures, mappings, and record actions your team already uses without accessing actual record data.

✓ No Token Anxiety

Use Titan AI Studio without separate AI credit costs, so teams can keep prompting and refining without turning every instruction into a mental math problem.

✓ Brand-Ready Design

Titan AI Studio goes beyond building Salesforce experiences, matching your brand style and generating responsive layouts for mobile and desktop from day one.

✓ Start With A Prompt, Finish With Drag-And-Drop

Keep improving the experience with prompts for quick changes and use Titan's no-code builder for more precise updates.

Security & Data Architecture

Salesforce Model Context and Record Protection

Security and record safety are Titan AI Studio's stand-out capabilities.

Titan AI Studio uses your Salesforce data model to shape forms and portals, including objects, fields, mappings, and logic for actions, without accessing your sensitive record data.

Popular Use Cases

- Lead capture and onboarding forms
- Customer feedback and service requests
- Event registration forms
- Customer and partner portals
- On-click action workflows connected to Salesforce
- Guided intake and approval processes

Bottom Line

Titan AI Studio is built for Salesforce teams ready to expand what they can do in Titan, supporting the full build, not just the first version.

Connecting to Salesforce, AI Studio works with your data model, protects records, and lets teams continue to refine and update every project in Titan's no-code builder.

Forms and portals start faster, stay governed, and remain easier to maintain.
